                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
The invention relates to the isolation of genes and their encoded cc proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens cc and related species; to study polymorphisms; for gene analysis and for cd detection/amplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification cc of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that cc animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. cc luminescens. Cells transformed to express the genes are useful for crecombinant production of the proteins, particularly toxins and cc antibacterials useful as insecticides, bactericides and fungicides. The genes, proteins, vectors containing the genes and bacteria or fungit that the containing the genes and selection of that also useful the containing the genes and selection of the proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antibacterial; fungicide; insecticide; polymorphism; genetic analysis; detection; food; gene expression; plant; animal; microorganism; toxin; antibiotic; biopesticide; virulence factor; disease model; plague;

Other uses of the genes and the proteins are as viruler factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                   860

?

Genomic sequence of Photorhabdus luminescens useful e.g. as therapeutic antimicrobials and Claim 1; SEQ ID NO 32; 1205pp; French. and and and encoded polypeptides, agricultural pesticides.

The invention relates to the isolation of genes and their encoded CC proteins from Photorhabdus luminescens. The isolated sequences are CC sources of probes and primers for detecting the genome of P. luminescens CC and related species; to study polymorphisms, for gene analysis and for CC detection/amplification of the genes. Antibodies (Ab) raised against the CC polymeptides encoded by the genes are used for detection/identification CC polymeptides encoded by the genes are used for detection/identification CC control of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that CC carry a gene-containing vector are used to select compounds that CC carry a gene-containing the toxins and antibiotics produced by P. CC undinals or microorganisms other than P. luminescens and are able to alter CC response or sensitivity to toxins and antibiotics produced by P. CC luminescens. Cells transformed to express the genes are useful for CC entibacterials useful as insecticides, particularly toxins and CC entibacterials (to treat microbial infection by bacteria or fungi that CC genes, proteins, vectors containing the genes and Ab are also useful CC are sensitive to P. luminescens-encoded toxins or antibiotics) and as dispositive to P. luminescens-encoded toxins or antibiotics) and as dispositive to P. luminescens-encoded toxins or antibiotics) and as dispositive to P. luminescens-encoded toxins or antibiotics) and as dispositive to P. luminescens-encoded toxins or antibiotics) and as dispositive to P. luminescens-encoded toxins or antibiotics) and as dispositive to P. luminescens encoded toxins or antibiotics) and as dispositive to P. luminescens encoded toxins or antibiotics) and as dispositive to P. luminescens encoded toxins or antibiotics) and as dispositive to P. luminescens encoded toxins or antibiotics) and as dispositive to P. luminescens encoded toxins or antibiotics) and as dispositive to P. luminescens encoded toxins or antibiotics). This cc.

The invention relates to an isolated nucleic acid comprising any one of CC of the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits promoter operably linked to the nucleic acid comprising a promoter operably linked to the nucleic acid comprising a promoter operably linked to the nucleic acid compounds a polypeptide whose expression is inhibited by the antisense compound in the linked to the nucleic acid compounds and isolated compounds of the polypeptide of specifically binding compounds in inhibited by the antisense compounds in inhibited by the antisense compounds in inhibited by the compounds of the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular compounds that influences the activity of agene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation or that has an activity against a biological pathway in which a proliferation required gene or its gene product lies compound that inhibits proliferation of the compound that inhibits proliferation of a compound's activity, in culture comprising strains in which the gene compound's activity, in culture comprising strains in which the gene compound's activity, in an antibiotic; (10) profiling a compound's activity, in culture comprising strains in which the gene compound's activity, in the target of a compound that inhibits proliferation of the strains is present in a culture or collection of compound's activity in the target of a compound that inhibits the extent strains; or (13) identifying proteins or screening for homologous nucleic acids are useful for compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 14; SEQ ID NO 8516; 1766pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents DNA encoding an A. baumannii

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 888888888888888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of the nucleic acid inhibits proliferation of a cell. Also included are:
(C) (1) a vector comprising a promoter operably linked to the nucleic acid
(C) encoding a polypeptide whose expression is inhibited by the antisense
(C) contest acid; (2) a host cell containing the vector; (3) an isolated
(C) antisense nucleic acid; (4) an antibody capable of specifically binding
(C) contiseration or the activity of a gene in an operon required for
(C) proliferation; (7) identifying a compound that influences the activity of
(C) required for proliferation, or that inhibite cellular proliferation; (8)
(C) compound's gene required for cellular proliferation or the biological
(C) pathway in which a proliferation or that inhibite cellular proliferation; (8)
(C) compound's activity; (11) a culture dene or its gene product of
(C) compound's activity; (11) a culture comprising strains in which the gene
(C) product is overexpressed or underexpressed; (12) determining the extent
(C) strains; or (13) identifying an antibiotic; (10) profiling a
(C) product is overexpressed or underexpressed; (12) determining the extent
(C) to which each of the strains is present in a culture or collection of
(C) proliferation of an organism. The antisense nucleic acids required
(C) did iscovery programs, or for screening homologous nucleic acids required
(C) compound activity in the same nucleic acids are useful for
(C) compound activity in the same nucleic acids are useful for
(C) compound activity in the same nucleic acids are useful for
(C) compound activity in the same nucleic acids are useful for
(C) proliferation of an organism. The antisense nucleic acids required
(C) did iscovery programs, or for screening homologous nucleic acids required
(C) compound activity in the same antisense nucleic acids required
(C) prokaryotic essential genes. Note: The sequence is one of the target
(C) prokaryotic essential genes. Note: The sequence data for this patent did
(C) compound the compound that inhibits the sequence data for this patent did
(C) prokaryot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Local Similarity

isolate candidate molecules for rational drug discovery programs

14; SEQ ID NO 11985; 1766pp; English

the fall antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(C) a vector comprising a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense comprising a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense comprising the vector; (3) an isolated complete acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, or that has an activity against a biological pathway capable of specifically binding cellular proliferation; (7) identifying a compound that influences the activity of agene product or that has an activity against a biological pathway capable of specifical pathway in which a proliferation, or that inhibits proliferation or the biological pathway in which a proliferation, or that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collular proliferation of culture comprisins in which the gene proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational conditions or screening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target corrolled form part of the printed specification, but was obtained in cellectronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences invention relates to an isolated nucleic acid comprising any one of

Sequence 1092 BP; 175 A; 396 C; 362 G; 159 ij, o u; 0 Other;

cc (1) a vector comprising a promoter operably linked to the nucleic acid (2) a host cell containing the vector; (3) an isolated congregation or its fragment whose expression is inhibited by the antisense comprising a polypeptide whose expression is inhibited by the antisense compression or its fragment whose expression is inhibited by the continuous control of the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular control or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of confidenciating identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway confidentifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an corganism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation or screening for homologous nucleic acids are useful for cellular proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

      Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                     267.4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2
                                                                                                                                                                                                                                                              APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 1008
LENGTH: 1266
TYPE: DNA
ORGANISM: Pseudomonas aeruginosa
